Extreme Loneliness

You answered this quiz consistent with people who are suffering from extreme and severe loneliness.

A certain amount of loneliness is a normal part of most people's lives. But when your feelings of loneliness can become a bit overwhelming or more serious than usual -- like now -- it may be a sign that something isn't quite balanced in your life.

You may find that you could benefit by trying to reach out to others in your life -- right now. A close friend or family member whom you trust and talk to can go a long way in helping to relieve feelings of loneliness in many people.

SCORING KEY

If you scored...	You may have...
30 & up	Extreme Loneliness
22 - 29	Moderate Loneliness
15 - 21	Normal Loneliness
0 - 14	Little to No Loneliness

This is not a diagnosis tool.
